

CS Fundamentals Assignment-4

Aduita Srivastava
2501730206

Personal Portfolio Website

This is a simple static portfolio website created using **HTML and CSS**.

It showcases my basic web development skills as a beginner, including layout design, page structure, and styling.

The website includes sections such as **About Me, Skills, Projects, and Contact**.

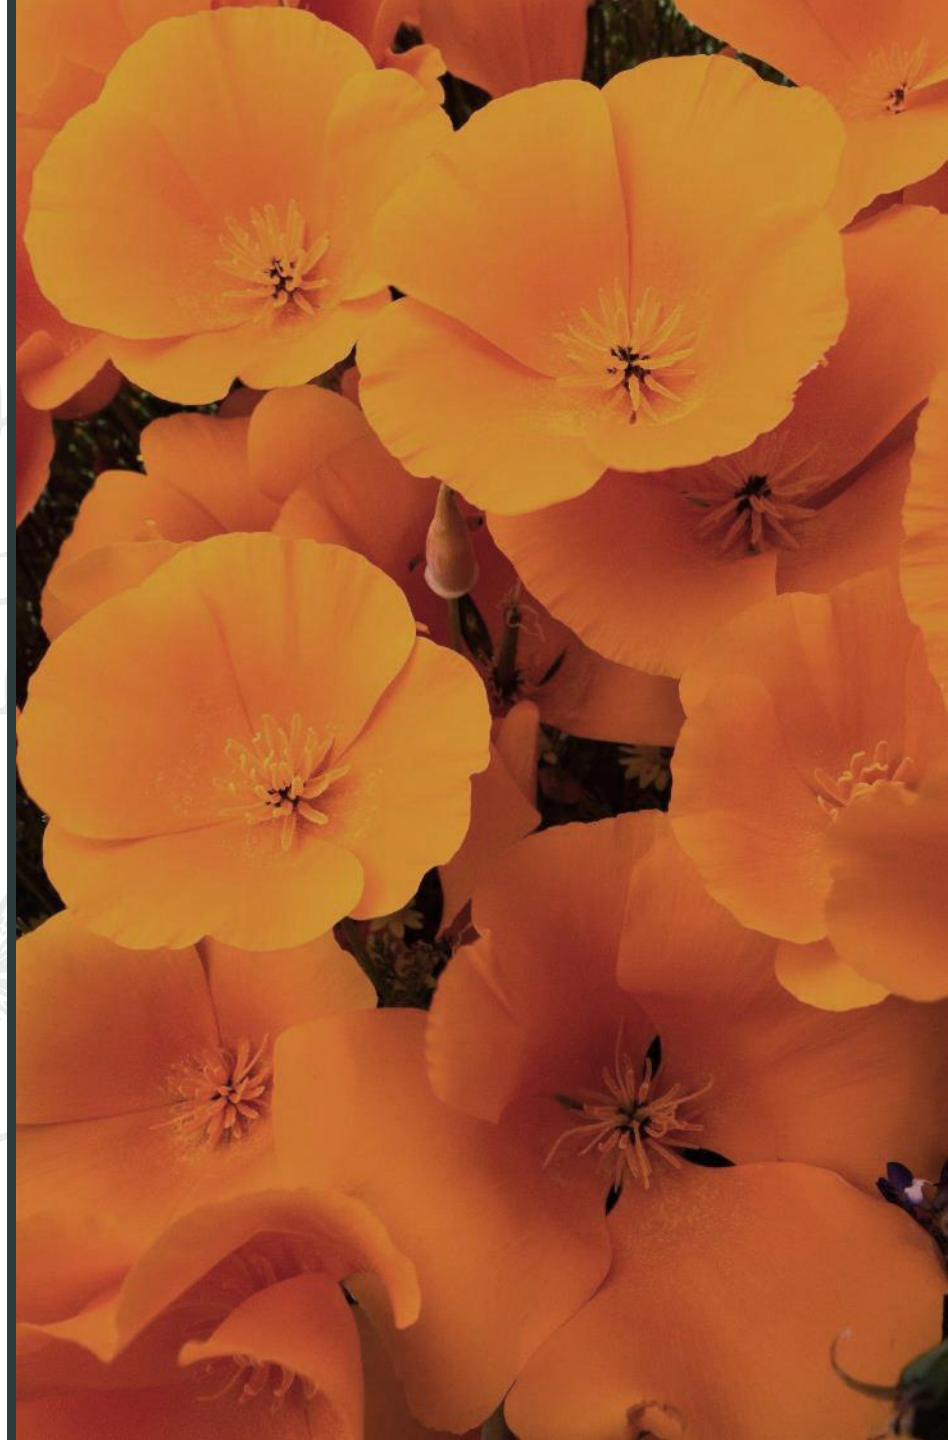

Static Portfolio Website

Features

- Clean and simple responsive layout
- Hero section with introduction
- About Me page describing background and goals
- Skills section showing current skill levels
- Projects section for future work
- Contact form UI
- Fully static

Project Overview

- This project is a basic **static portfolio website** built using HTML and CSS.
It was created to practice structuring a webpage, working with sections, and applying custom styles.
 - The goal is to present:
 - who I am
 - what skills I am learning
 - what projects I am working on
 - how people can contact me
 - The project follows a simple layout and is beginner-friendly.
-

Hi, I am Full Stack Developer

Building modern web applications with MERN stack.

About Me

Hello! My name is Aduita Srivastava, and I am currently learning web development. This is my first portfolio website where I showcase my passion for creating interactive and responsive web pages. I am a highly motivated self-starter committed to continuously improving my skills and knowledge in the field of web development.

Development Process

1. Planning the Website

I first outlined the sections I wanted:

Header with navigation

Hero section

About Me

Skills section

Projects section

Contact form

Footer

Creating the HTML Structure

I wrote the HTML file (index.html) using semantic elements like:

`<header>`

`<section>`

`<main>`

`<footer>`

This created the skeleton of the website.

3. Adding Content

I added:

My introduction

Skill cards (HTML, CSS, JS)

Project placeholders

Contact form fields

Styling with CSS

I used a separate CSS file to handle:

Layout

Colors

Fonts (Google Fonts – Roboto)

Grid and flexbox components

Buttons and card styles

Testing

I opened the page in a browser and checked:

Layout spacing

Image alignment

Navigation links working

Responsiveness on smaller screens

Version Control

I used Git and GitHub to:

- Track changes (commits)
- Store the project online
- Organize it properly for the assignment

Future-improvements

Add Responsive Design

Add JavaScript

Add More Pages

Use a Backend or Database (Later Learning)

Add Animations

Thank you!
